

## DESIGN-BUILD UPDATE - GOLDEN HILL TO WEST PORTAL

Construction has been accelerated on the Golden Hill to West Portal (canyon entrance) section to enable the associated benefits to be realized as early as possible. Under a design-build contract awarded to Emil Anderson Construction, work will include an

interchange at Golden Donald Upper Road, cycling/pedestrian trails and wildlife protection. The design-build approach provides for quicker delivery of construction by combining the design stage and the construction stage into one contract. This enables the contractor to tailor the delivery of the work to take greater advantage of design refinement and innovation opportunities during the construction stage.
